## SUMMARY

Wood surface treatment technologies applied to wood furniture has many different methods, traditional methods have been applied for a long time and modern methods have emerged. Each method has its own advantages and disadvantages. One of the current trends is the use of traditional methods of renewable natural materials that have the effect of protecting the environment. This technology is relatively popular in many countries around the world, especially in Asia. However, due to the long-term formation and development process, the storage and delivery process cannot be guaranteed, so it has been partially destroyed. In addition, due to the improvement of quality requirements, traditional products do not. It can meet the research hot wax furniture technology to improve the technology and direction of current technology development to meet the growing reality.

**Keywords:** Beeswax, hot wax, insect wax, natural wax, paraffin wax.
