SUMMARY

In the process of national industrialization and modernization, the role of agriculture in rural areas development is not deniable. Vietnam has more than 70% of people living in rural areas and operating in the agricultural sector, the potential for agricultural development is relatively large, but the results of the agricultural sector are not adequate. By studying the status of agricultural development in recent years, the research shows that the investment capital mobilization was from 5 main sources: State budget, ODA, FDI, microfinance, commercial banks and sources from private businesses, people. Of all these sources, the state budget has gradually decreased while the other sources have showed an upward trend in recent years. The research proposes measures to facilitate resources mobilization for agricultural development, to promote potentials and strengths.

Keywords: Agriculture, FDI, investment capital mobilization, rural areas, state budget.
