## SUMMARY

Forest has an important role in the socio - economic life of nations, not only in the field of economics but also in the fields of society, environmental protection. However, in the process of developing forests in general and developing production forests in particular, there are certain difficulties in mobilizing financial resources. In recent years, Hoa Binh province has mobilized some resources to develop production forests, but the result is too small for the development. In this study, the authors will analyze and analyze the situation of mobilizing financial resources, give the factors influencing the results of mobilization in the past, Identify the success and survival. From there, propose some solutions to effectively mobilize financial resources to develop production forests in Hoa Binh and other provinces in the country.

**Keywords:** Finance, production forest, production forest development.
